

Meridian Robotics — Q2 2025 Investor Report

Financial Summary

Meridian Robotics reported Q2 2025 revenue of \$18.6 million, up 34% year-over-year, driven primarily by ATLAS-1 pilot program licensing fees and Navigator software subscriptions. Gross margin improved to 61%, up from 54% in Q2 2024, reflecting manufacturing cost reductions achieved through the company's second-generation actuator design.

Operating expenses totaled \$14.2 million for the quarter, an increase of 28% year-over-year, primarily attributable to the expansion of the robotics engineering team from 14 to 23 employees during the first half of 2025.

Product Milestones

The ATLAS-1 autonomous warehouse robot completed its pilot program with three logistics partners, achieving 99.2% average pick accuracy. Full commercial availability is planned for Q4 2025 with an initial production run of 500 units.

The Navigator fleet management platform was upgraded to support coordination of up to 200 robots per warehouse site, a fourfold increase over the previous release's 50-robot limit.

Outlook

Management expects Q3 2025 revenue in the range of \$21 million to \$23 million, reflecting continued ATLAS-1 pilot conversions and early Navigator platform renewals. The company is not providing full-year guidance at this time due to ongoing evaluation of Scout-Mini drone battery technology, which may affect the timeline for that product's Q1 2026 planned launch.
